

## MI 349 Final Project Preproduction

### Short pitch:

This is a personal website to showcase completed work and me as a person. It will provide quick and easy access to my resume and other relevant and important information.

### Long pitch:

The personal website will act as a professional online presence to showcase my work and skills. It will be a portfolio where potential employers, colleagues, and peers can easily access and review my resume, past projects and other relevant achievements. Through an intuitive and user-friendly design, the website will highlight my strengths and expertise in a clear and organized manner. In addition to a downloadable resume, it will have external links to my other profiles on platforms such as GitHub and LinkedIn.

### Personas:

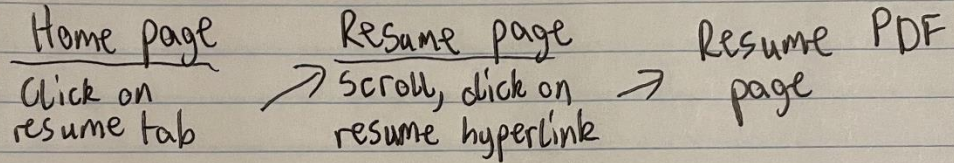

- 35-year-old computer science recruiter who is numb to scrolling through applications
- (In the future) potential client or employer for freelance work in the programming field

### Comparative Websites:

- <https://shellbear.me/> Great layout and minimalistic design, concise information
- <https://brittanychiang.com/>

## About Me

Currently a junior Computer Science student at Michigan State University. Have an interest in Frontend Development and Software Engineering.

I have been interested in computers and technology ever since I sat in front of one in elementary school. I lived through the development of smart phones while using my dad's old BlackBerry for some time. I am fascinated by just how quickly this technology has morphed and changed itself to become more efficient and utilized by everyone all across the globe.

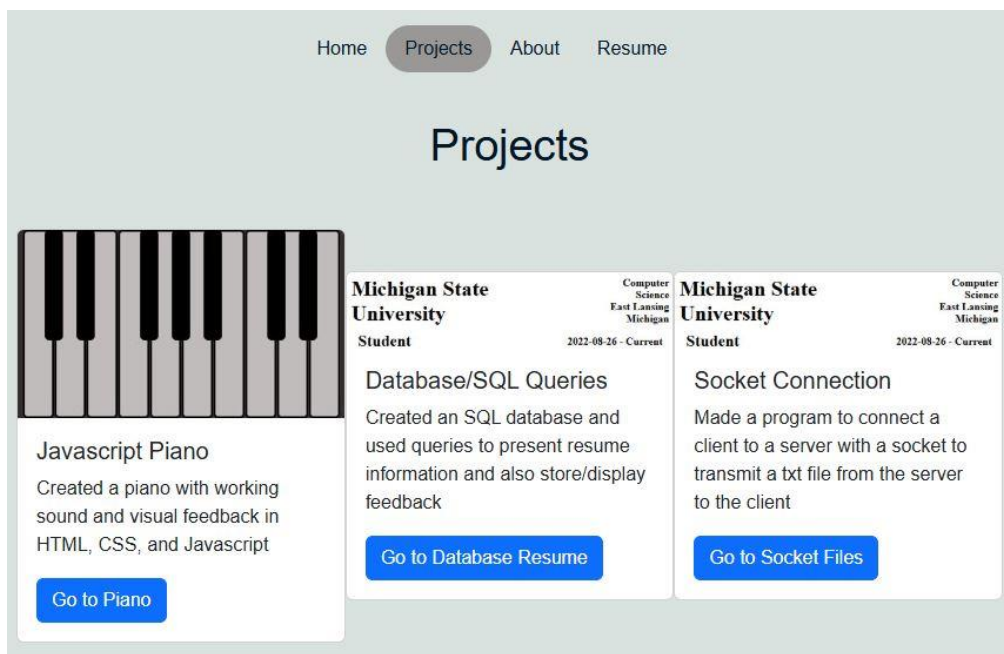

When I'm not at my computer, I like to hang out with my friends, work out at the gym, and watch football every Sunday.

Initial Website Process:

Initial home page, kept simple to put a name to a face and have some general links

Initial projects page, made individual cards for each project and a link to their respective pages or applications

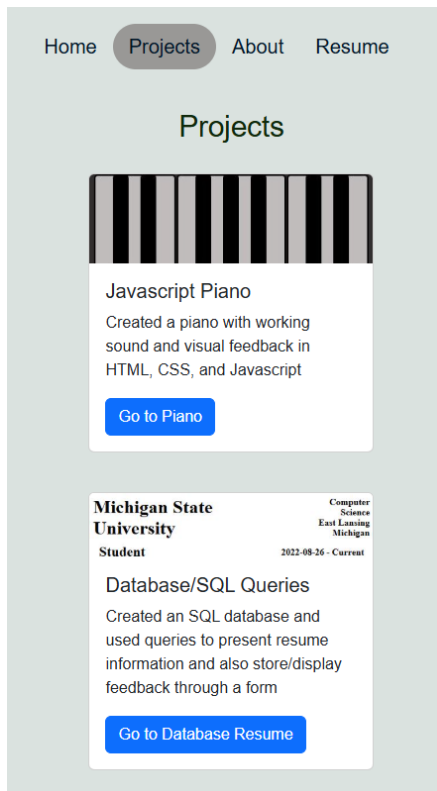

Initial about page, wrote a more in-depth representation of myself and explained my interest in the field

Progress:

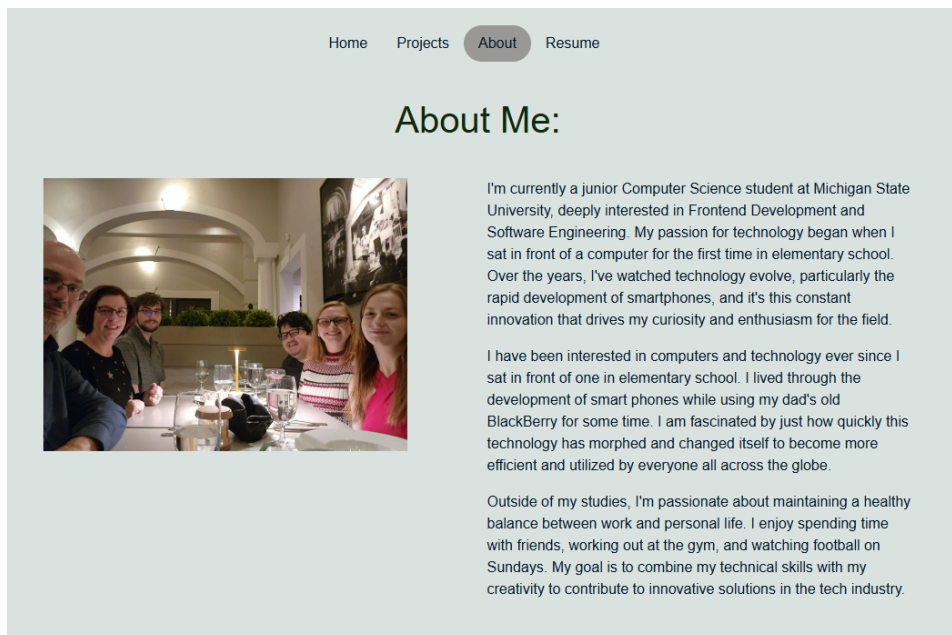

Created a mailto: button for easy contact

Added media change in css file to change the projects into a one column list once the screen had a width less than 1150 pixels

Added picture to the about screen to be more welcoming to the reader

Junior at Michigan State University pursuing a major in Computer Science

## Contact Me:

## About Me:

I'm currently a junior Computer Science student at Michigan State University, deeply interested in Frontend Development and Software Engineering. My passion for technology began when I sat in front of a computer for the first time in elementary school. Over the years, I've watched technology evolve, particularly the rapid development of smartphones, and it's this constant innovation that drives my curiosity and enthusiasm for the field.

I have been interested in computers and technology ever since I sat in front of one in elementary school. I lived through the development of smart phones while using my dad's old BlackBerry for some time. I am fascinated by just how quickly this technology has morphed and changed itself to become more efficient and utilized by everyone all across the globe.

Outside of my studies, I'm passionate about maintaining a healthy balance between work and personal life. I enjoy spending time with friends, working out at the gym, and watching football on Sundays. My goal is to combine my technical skills with my creativity to contribute to innovative solutions in the tech industry.
